

ENERGY STAR® ROOM AIR CONDITIONER REBATE FOR LOUISIANA AND TEXAS RESIDENTIAL CUSTOMERS

ENERGY STAR-certified room air conditioners use 15-26 percent less energy depending on the product class and, on average, cost about \$57 per year to run. Room air conditioners with variable speed technology save even more energy and quietly keep you cool. ENERGY STAR certified room air conditioners come with better materials and clearer instructions to improve sealing and insulation around the unit, so costly and uncomfortable air leaks are minimized.

WHY PURCHASE AN ENERGY STAR-CERTIFIED ROOM AIR CONDITIONER?

ENERGY STAR certified room air conditioners with connected functionality offer additional convenience, comfort, and energy-savings, including the ability to:

- Turn off the unit remotely using your phone or computer.
- Schedule changes to temperature settings based on your needs.
- Receive feedback on the energy use of the product.

If all room air conditioners sold in the United States were ENERGY STAR certified, the cost savings would grow to more than \$1 billion each year, preventing more than 5.7 million metric tons of greenhouse gas emissions annually – equivalent to the emissions from over 1.2 million vehicles.

WHAT ELSE SHOULD I LOOK FOR WHEN BUYING A ROOM AIR CONDITIONER?

Make sure your unit is properly sized. An oversized air conditioner wastes energy and it does not provide better cooling. When installing your new unit, be sure to follow the instructions in the manual and use the included insulation materials.

ROOM AIR CONDITIONERS WITH VARIABLE SPEED TECHNOLOGY

Consider purchasing a room air conditioner with variable speed compressor technology. The compressor works either at maximum capacity when the room thermostat calls for cooling or off when the desired temperature has been achieved, typically alternating frequently between full on and off. Room air conditioners with efficient variable speed compressors can vary the speed of the internal compressor motor to continuously control the temperature. As a result, the capability for efficient variable output allows a room air conditioner to quietly cool the room and save a significant amount of energy.

PROPERLY SIZED ROOM AIR CONDITIONERS

Room air conditioner sizing is all about matching the room size to the air conditioner size. A unit that is too big will be less effective and offer reduced air conditioner efficiency. If the unit is too large, it will cool the room before it has a chance to remove the humidity. This can lead to discomfort because cool, moist air will make the room feel damp and clammy. *
