

ENERGY STAR® AIR PURIFIER REBATE FOR LOUISIANA AND TEXAS RESIDENTIAL CUSTOMERS

Room air cleaners are portable, electric appliances that remove fine particles, such as dust and pollen, from indoor air. A standard room air cleaner, operating continuously, uses approximately 450 kWh per year in electricity. This is more than the energy used by some new refrigerators!

ENERGY STAR certified room air cleaners are about 25% more energy-efficient than standard models, saving consumers about 120 kWh/year and \$18 annually on utility bills. These savings could add up to \$130 over its lifetime!

What should I look for when buying a room air cleaner?

Indoor air contains pollutants that can affect human health. Some of these pollutants come from outdoors, and others come from indoor sources and activities, such as cooking, cleaning, secondhand smoke, building materials, consumer products, and home furnishings. Learn more about the latest indoor air quality issues that may be impacting you, as well as steps you can take by visiting EPA's Indoor Air Quality website.

Portable air cleaners are designed to filter the air in a single room or area. They have demonstrated the potential for improving air quality and providing health benefits. Find the right room air cleaner product for your home with the tips below and read more about managing your indoor air quality in EPA's [Guide to Air Cleaners in the Home \(epa.gov\)](#).

Check your room size

Be sure to consider the square footage of the room where you will place the room air cleaner. Larger models use more energy, so choose a model that is sized appropriately to fit your room. The CADRs are calculated based on an 8-foot ceiling. If you have higher ceilings, you may want to select a portable air cleaner with a higher CADR. *
