Variable speed and multi-speed pool pumps can help cut energy costs, as well as offer other desired features. For example, variable speed pumps are quieter, require less maintenance and last longer. Both variable speed and multi-speed pumps, through slower water filtration rates, allow for better and more effective filtration of the pool water. The slower circulation rates also put less strain on the filters, plumbing, and other parts of the system, reducing the chance of leaks, repairs, or premature plumbing component replacement.¹ In addition, ENERGY STAR certified pool pumps can use more efficient motors and advanced hydraulic designs. ENERGY STAR certified pool pumps include in-ground pool pumps, above-ground pool pumps and pressure cleaner booster pumps. *
